TAHUN 2024**

## Modul A System Integration Troubleshooting

Your new responsibility entails serving as a support engineer, tasked with aiding a non-profit organization in addressing office-related issues. This involves assisting with troubleshooting across their integrated system, which includes Debian servers, Windows servers, Cisco routers, Windows clients, and Debian clients.

Services, protocols or technologies that need to be prepared:

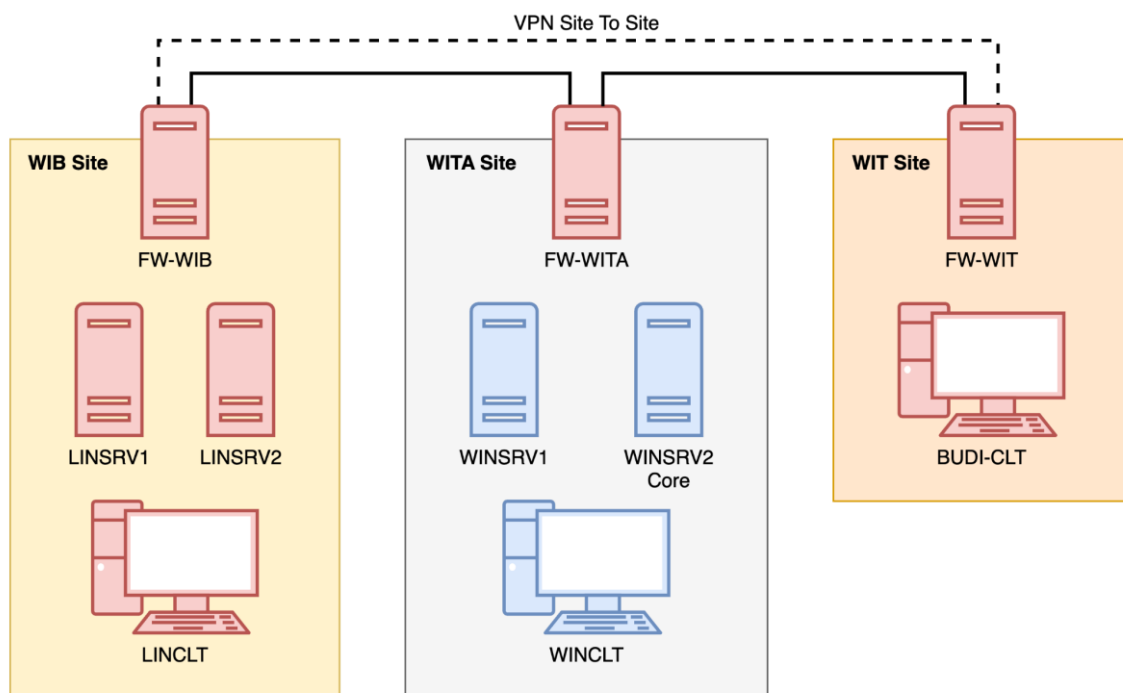

- Routing
- VPN
- Firewall
- Web Server
- Reverse Proxy
- Active Directory
- DNS Server
- SSH Server
- Remote Desktop
- File Sharing

## Modul B Client Server

### Description

An IT company specializing in automotive industry aims to broaden their sales in Indonesia by establishing branches across different time zones in the country. As engineers, we are tasked with configuring servers according to their requirements. Subsequently, details regarding the required Topology and Services will be provided.

### Topology

### Services

#### WIB Site:

- DNS Server
- WEB Server
- Email Server with SMTP and IMAP
- Roundcube Webmail
- DHCP Server
- RAID
- Certificate Authority
- Site to Site Openvpn
- Sudo Restriction

#### WITA Site:

- Active Directory Server
- DNS Server
- Web Server

- Windows Backup
- DFS Replication
- Cron/Scheduled Task
- ISCSI

WIT Site:

- Site To Site Openvpn
- Remote Access VPN

## Modul C Infrastructure Programmable & Automation

### Description

The government infrastructure has already been manually configured, but they now want to transition to Infrastructure as Code (IAC) using Ansible tools. We are tasked with designing this IAC solution based on the following criteria.

### Topology

#### Task requirements:

- Use Jinja2 Template
- Managing anisble inventory
- Managing role
- Managing secrets
- Playbook are idempotent
- Loop

#### Service that will install use ansible

- DNS Server
- WEB Server
- HAProxy

## Modul D Network Systems

### Description

You have been assigned the task of configuring the network infrastructure for a multinational company's new area, encompassing switching, routing, and other essential network services. The objective is to establish connectivity among all nodes through both static and dynamic routing methods. Additionally, to enhance performance, the network system integrates radius services and server monitoring. Furthermore, as a critical element of the Test Project task, ensuring security is paramount.

### Topology

### Services, protocols, or technologies that need to be prepared:

- Basic Configuration & IP Addressing
- Switching
  - VLAN
  - Spanning Tree Protocol (STP)
  - EtherChannel
  - FHRP
- Routing
  - Inter-VLAN Routing
  - Static Routing & Dynamic Routing
- Services
  - Dynamic Addressing
  - Network Address Translation
  - Radius
  - Network Monitoring
- LAN Security
